

Password Generator

Write the program in:

- Scriptwise
- Functionwise

Version 1

Write a program to generate the password after asking the user the 3x questions.

Generate the password and display it on the screen(Terminal) and also save it into a text file called "password.txt"

```
Enter the password length: 12
With Special Special Charachter [y/n] ? y
With duplicate [y/n] ? n
```

```
The password is : AcFgZh@3HqLp
```

Extension

Use a JSON file to store the name of the export file "password.txt". And the app should read the JSON file and get the output/export file name dynamically and not hard coded.
